# IPv6 Best Practices

---

Denise Hill, Senior Technical Advisor

DOE IPv6 Transition Initiative

April 17, 2012

U.S. DEPARTMENT OF  
**ENERGY**

Office of the Chief  
Information Officer

The DOE enterprise is dynamic with diverse mission and business objectives that drive organizational IPv6 strategic planning.

## Panel of Subject Matter Experts

- ❖ **Pamela Wise-Martinez – NNSA**
- ❖ **Denise Hill – IM-40; DOE Sr. Technical Advisor**
- ❖ **Michael Sinatra – Energy Sciences Network**
- ❖ **Seth Hall – BRO**
- ❖ **Laura Hobgood – IM-40, Project Mgr. (moderator)**

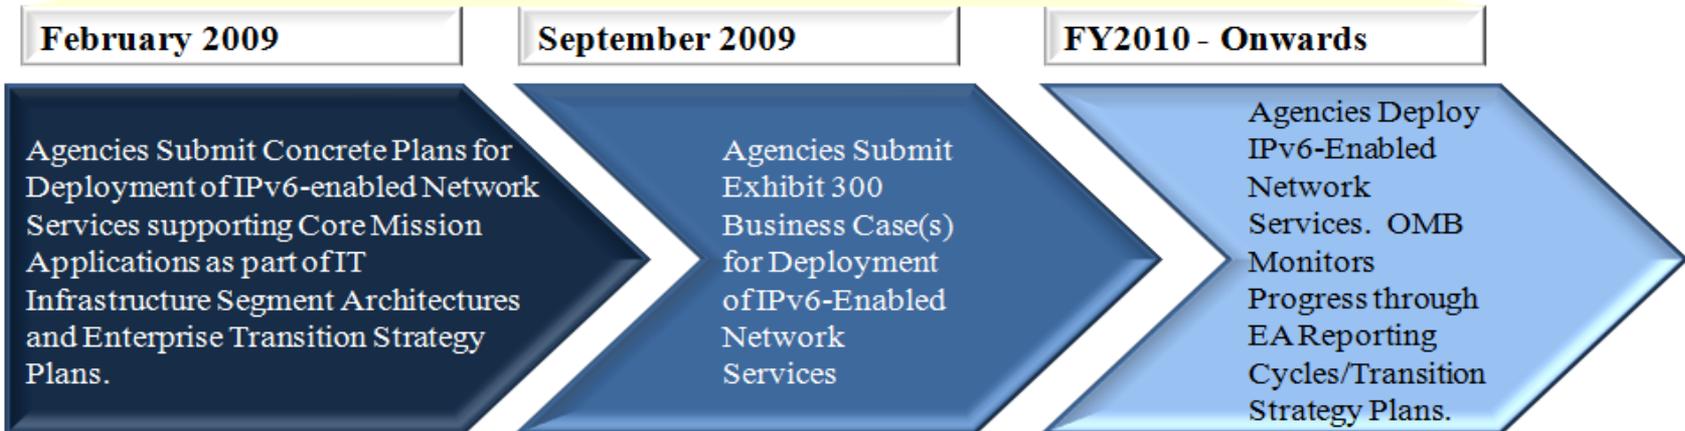

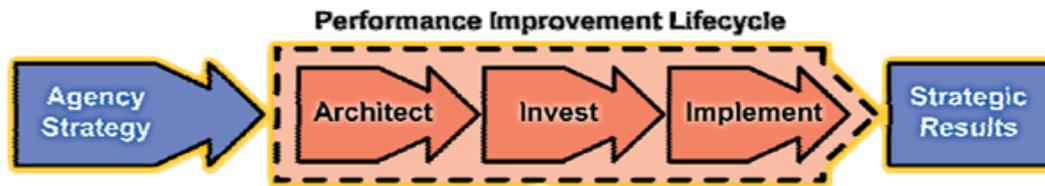

NOTE: Back up slides can be found at the end of the deck

## IPv6 Transition Planning

- ❖ **Mission and Business Driven Objectives**
- ❖ **Enterprise Architecture / Capital Planning and Investment Planning**
- ❖ **Acquisition and Procurement Planning**
- ❖ **Governance and Reporting**
- ❖ **Enterprise Infrastructure**
- ❖ **Security**
- ❖ **Application Hosting Environment and Applications**
- ❖ **Testing and Certification**
- ❖ **Training**
- ❖ **Documentation Updates**

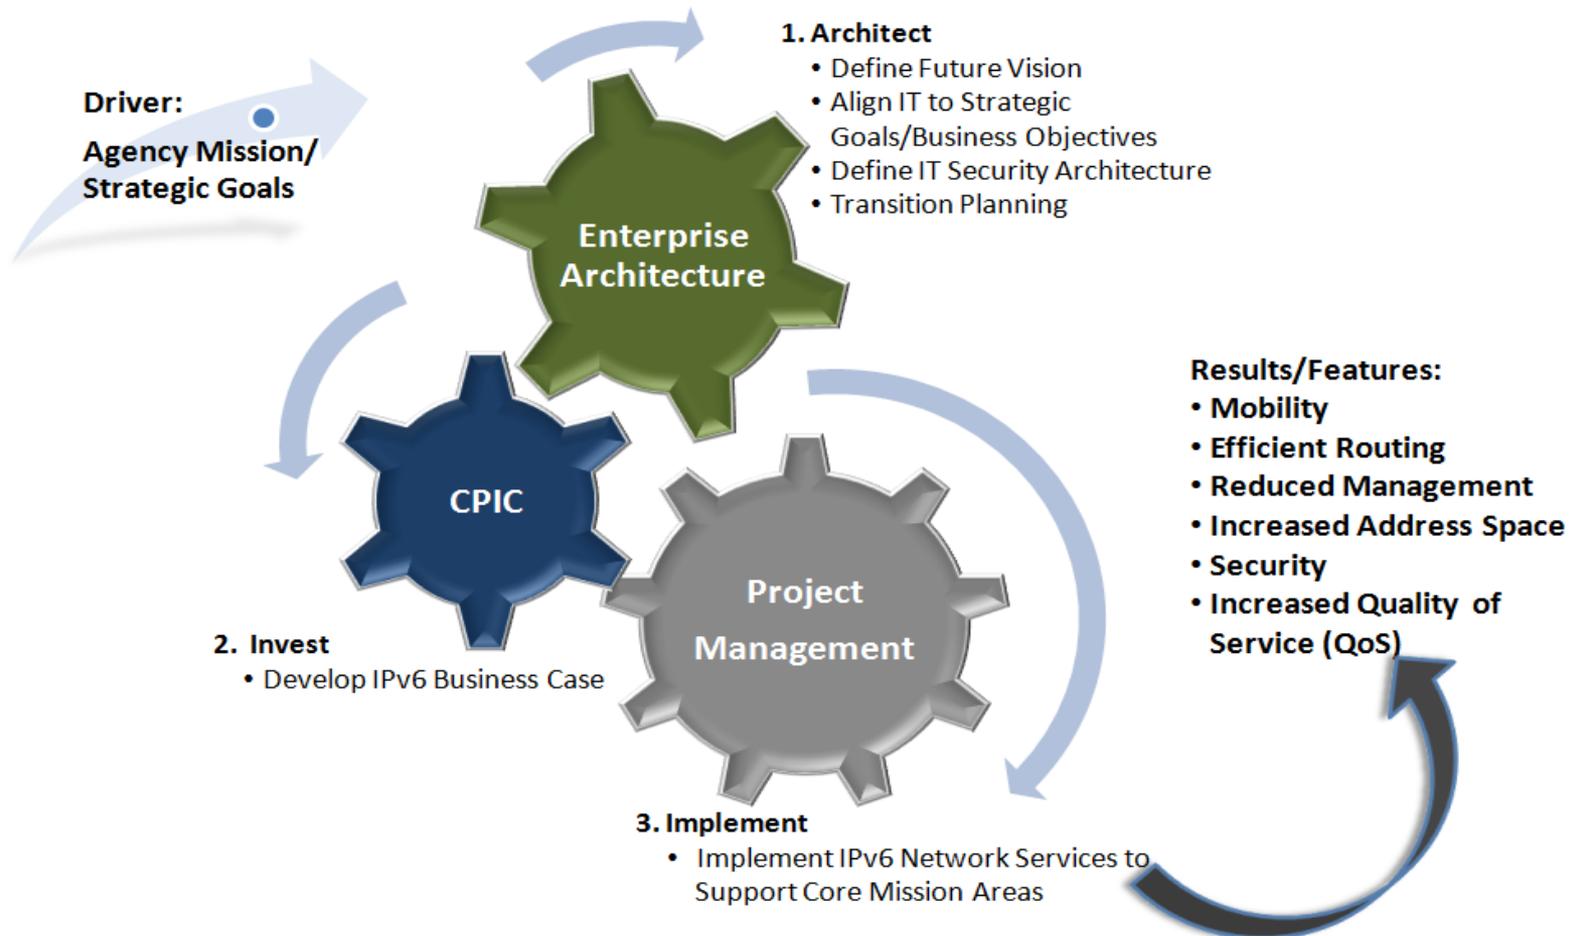

## Agency Mission/Strategic Goals

## Enterprise Architecture & Capital Planning IPv6 Roadmap (Federal CIO Roadmap)

## Agency Mission/Strategic Goals

## IPv6 Transition Concept of Operations (Federal CIO Roadmap)

### Capabilities Checklist

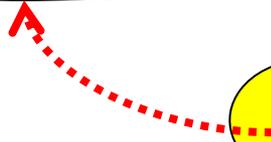

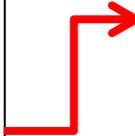

Spec / Reference	Section	IPv6 Requirements	Configuration Option	Device Type	Host	Router	NPD	Notes
Note: Gray check boxes imply an arbitrary selection for device type. See profile text for details.								
Note: M indicates category/context contains unconditional/mandatory requirements. See NIST for details.								
SP500-267	6.1	<b>IPv6 Basic Requirements</b>			M	M		
		support of stateless address auto-configuration	SLAAC					Host:DO-11
		support of SLAAC address auto-configuration	IPv6Addr					
		support of stateful DHCPv6 address auto-configuration	DHCPv6-Client					Host:DO-11
		support of automatic router prefix delegation	DHCPv6-Proxy					
		support of neighbor discovery security extension	SEND		M	M		
SP500-267	6.4	<b>Addressing Requirements</b>						
		support of cryptographically generated addresses	CGA		M	M		
SP500-267	6.7	<b>IP Security Requirements</b>						
		support of the IP security architecture	IPsec-V6		M	M		
		support for automated key management	ISEv2		M	M		
		support for encapsulative security payload in IP	ESP		M	M		
SP500-267	6.11	<b>Application Requirements</b>						
		support of DNS client/resolver functions	DNS-Client					
		support of Socket application program interfaces	SOCK					
		support of DNS application resource identifier	URI					
		support of a DNS server application	DNS-Server					
		support of a DHCP server application	DHCP-Server					

### USGv6 Profile

### Node Requirements

Spec / Reference	Section	USGv6-VI Node Requirements	Status	Year	Condition / Comment	Host	Router	NPD	Effective Date
<b>Minimum Requirements</b>									
SP500-267		IPv6 Version 6 and IPv6	PS	2004		M	M		2010/03
SP500-267		Source Specific Multicast for IP	PS	2006	SSM	(CR)	(CR)		2010/03
SP500-267		Multicast for Source Specific Multicast (SSM)	PS	2006	SSM	(CR)	(CR)		2010/03
<b>Preferred Independent Multicast (PIM)</b>									
SP500-267		PIM Sparse Mode (SM)	PS	2006	SSM		(CR)		2010/03
SP500-267		Protocol Security Issues - Enhancements	HP	2006	SSM		(CR)		2010/03
SP500-267		Enabling End-to-End IPv6 Mcast Apps	PS	2004	SSM		(CR)		2010/03
<b>Maximum Requirements</b>									
SP500-267		Multiple Routes to IPv6	PS	2004	MFC	(CR)	(CR)		2010/03
	6.1	All Nodes as Compression Nodes	MFC		M				2010/03
	6.2	Route Optimization	MFC		(CR)				2010/03
	6.3	Allow route optimization with Anycast	MFC		(CR)				2010/03
	6.4	IPsec Security	MFC			M			2010/03
	6.4	Host Agents	MFC			(CR)			2010/03
	6.5	Mobile Nodes	MFC		(CR)				2010/03
SP500-267		The Network Access Identifier	PS	2005	MFC	(CR)	(CR)		2010/03
SP500-267		Mobile Node Identification for MIPv6	PS	2005	MFC	(CR)	(CR)		2010/03
SP500-267		MIPv6 Operation with IPv6 and IPv4-v6	PS	2004	MFC	(CR)	(CR)		2010/03
SP500-267		Network Mobility (NEMO) Basis Support	PS	2005	NEMO		(CR)		2010/03

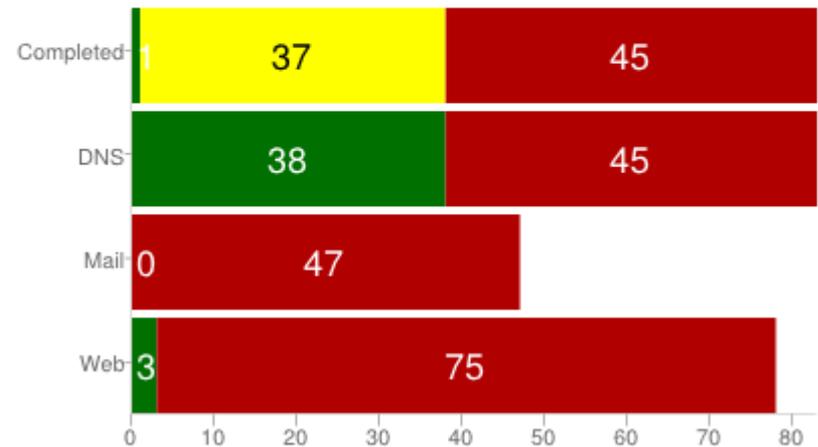

## Estimating IPv6 & DNSSEC External Service Deployment Status Department of Energy

### “Where are we now?” and “Are we making progress?”

- Tool examines IPv6 and IPv4 status of DNS, Mail and Web Services Weekly
- Tool is unrelated to the USGv6 profile and the USGv6 Testing Program
- Monitored domain and service; report estimated number of IPv4 interfaces for that services/and number of interfaces that:
- Includes a heuristic indication of whether the service in question seems to be operating within the domain in question or if it’s provided elsewhere.
- Monitor relies on the [DATA.gov](http://data.gov) list of agency domains [augmented].

IPv6 Enabled Domains  
 Department of Energy  
 83 tested on 2012.03.25

<http://usgv6-deploymon.antd.nist.gov/cgi-bin/cfo?agency=energy>

## Federal Initiatives

- **Align activities**
- **Optimize costs**
- **Increase effectiveness**
- **Cross reference documentation**

## Security

- ❖ Gain internal deployment experience to **minimize risk**
- ❖ **Simplify management** [remove NAT/VPN layers of complexity] and avoid outages
- ❖ Policy-based versus topology based **security model**
- ❖ Efficient **identification** and **authorization** of people, information, devices, and services centralized within the enterprise network
- ❖ Network sniffing architecture
- ❖ **Traffic analysis**, especially with Bro
- ❖ Intrusion **detection** and incident **response**

## Addressing, Testing, and Applications

- ❖ **Simplified** addressing – avoid complicated workarounds
- ❖ **Hybrid approach** to Network addressing
- ❖ Subnet capabilities create more **efficient network** and **systems**
- ❖ Device identification and **controls**
- ❖ Application **testing in lab** environment **before production** and roll out
- ❖ Testing as a **critical element** of the transition to an IPv6 Enterprise Environment
- ❖ **Validation** of applications and **certification** process **changes**
- ❖ **Align** IPv6 testing for **compatibility** and **certification** with timing of other programs
- ❖ **Dual compatibility** (IPv4/IPv6)

## Maximize Benefits

- ❖ Implementation costs far less than **anticipated benefits**
- ❖ Built in **Multi-casting capability** (messaging multiple networks simultaneously)
- ❖ **Improved security** – IPsec, etc.
- ❖ Better **performance** and operational **efficiency**
- ❖ Easier management - **auto configuration** of hosts, **auto discovery** of devices and users on the network.
- ❖ IPv6 specific features inherent in **new devices and software** allow for **operational enhancements**; Peer-to-Peer collaboration, plug/play identification and security capabilities
- ❖ Device and network **controls support** overarching **DOE mission** and **business objectives**.
- ❖ Supports **Mobility** and **tele-work** – implementation on carrier networks..

U.S. DEPARTMENT OF

**ENERGY**

Office of the Chief  
Information Officer

# Best Practices

## Training is critical

- ❖ Segment **employee** training and **involvement** in transition planning is critical
- ❖ Transition provides invaluable **Operational experience**
- ❖ **One step ahead** of customer requirements

U.S. DEPARTMENT OF  
**ENERGY**

Office of the Chief  
Information Officer

# Alignment with Federal Initiatives

**PANEL DISCUSSION**

**Q&A's**

U.S. DEPARTMENT OF

**ENERGY**

Office of the Chief  
Information Officer

# Alignment with Federal Initiatives

## Back-up Slides

## Considerations

- ❖ Integrate IPv6 into your organizational IT refresh cycles
- ❖ Assess the existing infrastructure and HW/SW inventory (baseline)
- ❖ Specify IPv6 compliance in all IT RFP's and purchases (capable/enabled/ready)
- ❖ Determine transition technology and decision strategy (dual stack/tunnels, etc.)
- ❖ Integrate IPv6 specialized training into IT Budget
- ❖ Prioritize financial strategy for IPv6 transition (milestones, business function, etc.)

## Acquisition

### IPv6 Acquisition Planning as a Requirement

- ❖ Proactive planning for today and tomorrow
- ❖ Ensure IPv6 is considered in all IT related purchases
- ❖ Consider agency level mission and ongoing initiatives
- ❖ Leverage IPv6 enterprise-wide impact

### Acquisition planning benefits

- ❖ Align with program level missions and objectives
- ❖ Coordinate purchases across initiatives
- ❖ Small increase in investment today saves money long term
- ❖ Result is cost efficient spending
- ❖ Senior management buy-in

## Acquisition

### Incorporate applicable processes and procedures

- ❖ Enterprise Architecture (EA)
- ❖ Capital Planning and Investment Control (CPIC)
- ❖ Change and risk management
- ❖ Integrated Project Teams (IPT)

### Relationships and Coordination between Teams

- ❖ Translation of requirements for better understanding
- ❖ IT mgt, network, security, application hosting, procurement
- ❖ Communicate technical requirements to procurement
  - Infrastructure, transport, equipment (routers, switches, firewalls, servers), software, security, etc.
- ❖ Coordination of process and procedural timelines

## Acquisition

### Acquisition role in IPv6 Transition Risk Mitigation

- ❖ Requirements checklist (for development)
- ❖ Supplier Declaration Of Conformity (SDOC) - details on Specs
- ❖ Mitigate potential impact on project schedule, cost, and resources:
  - Equipment replacement or upgrade (cost/timeline)
  - IPv6 performance impact on network and applications
  - Risk to availability of resources when needed
  - Delay of implementation activities

## Acquisition

## SDOC: Page 1

### Product identification

- Includes attestations for Composite Products, Original/Derived testing, IPv6 only, Tested/ Untested stacks, Product Families

Suppliers Declaration of Conformity for USGv6 Products		USGv6-v1 SDOC-v1.1 Page 1	
1	<b>The Document Requiring Conformity:</b>		USGv6 Profile Version 1.0, July 2008. (NIST SP500-267)
2	<b>Product Identifier:</b>		
3	<b>Supplier's Name, Address and SDOC Contact Details</b>		
4	<b>Product as Tested/Declared:</b> <i>Product Identifier, version/revision information, details of configuration tested.</i>		
5	<b>Product Family</b> (other products using same IPv6 stack(s) to which these results are declared to apply). <b>Check Product Family attestation below.</b>		
6	<b>USGv6 Capability summary.</b> (For each distinct IPv6 stack in the product provide a summary of its USGv6 capabilities below and include a detailed test result summary). <i>e.g. example-prod-id/stack-1: USGv6-v1-Host: IPv6-Base+Addr-Arch+IPsec-v3+IKEv2+SLAC+Link=Ethernet.</i>		
7	<b>Self Contained or Composite SDOC?</b> (Must indicate one).		
	<i>All of the declared USGv6 capabilities of this product are addressed by original test results reported in this SDOC.</i>	<input type="checkbox"/>	<i>Some or all of the USGv6 capabilities of this product are provided by the use and/or integration of unmodified components that have their own unique USGv6 SDOCs. All of the relevant referenced SDOCs are identified in section 8 and attached. This product's page 2 will indicate which capabilities are provided by specific referenced components (product-id/stack-id).</i>
8	<b>Additional Declarations / Attachments:</b> <i>(List supplier &amp; product-id/stack-id for referenced and attached test results in the case of composite products).</i>		
	<b>Component Supplier</b>	<b>Product ID:</b>	<b>Stack ID:</b>
	<b>Notes:</b>		
[1]			
[2]			
[3]			
[4]			
9	<b>Supplementary Attestations</b> <i>(Answer all).</i>		
	<i>This product is fully functional in IPv6 only environments. That is, no claimed capabilities are invalidated if this product is deployed in a network environment that does not support IPv4.</i>	<input type="checkbox"/>	<i>This SDOC contains a capabilities test report for each unique IPv6 stack in the product. If not, please document which stacks/ports are not covered, and how their IPv6 capabilities differ from those reported in this SDOC.</i>
		<input type="checkbox"/>	<i>All of the products listed in the product family in section 5 are implemented such that their USGv6 capabilities are identical in form and function across the entire product family. The specific conformance and interoperability test results for the USGv6 capabilities of an identified member of this product family are provided in this SDOC. The SDOC attests to the fact that these tested USGv6 capabilities are identical and unmodified for all the products cited above.</i>
10	<b>Signature</b>	<b>Date</b>	
	<b>Print Name / Title</b>

### Testing details

- Where tests run and passed
- Self Test when no public test spec available

11 Suppliers Declaration of Conformity for USGv6 Products: Declared Capabilities and Test Results Summary											USGv6-v1 SDOC-v1.1		Page 2
Product Id:				Stack Id:				USGv6 Testing Program Results					
Spec / Reference	Section	USGv6-v1 Profile Requirements	Context / Configuration Option	Host	Router	NPD	Test Suite Conformance/NPD	Test Lab / Result ID, Note #, or Component Ref	Test Suite Interoperability	Test Lab / Result ID, Note #, or Component Ref			
SP500-267	6.1	<b>IPv6 Basic Requirements</b>											
		support of IPv6 base (IPv6 ICMPv6 PMTU ND)	IPv6-Base				Basic_v1.*_C		Basic_V1.*_I				
		support of stateless address auto-configuration	SLAAC				SLAAC-v1.*_C		SLAAC-v1.0_I				
		support of SLAAC privacy extensions	PrivAddr				Self Test		Self Test				
		support of stateful (DHCP) address auto-	DHCP-Client				Self Test		DHCP_Client_v1.*_I				
		support of automated router prefix delegation	DHCP-Prefix				Self Test		Self Test				
		support of neighbor discovery security extensions	SEND				Self Test		Self Test				
SP500-267	6.6	<b>Addressing Requirements</b>											
		support of addressing architecture reqts	Addr-Arch				Addr_Arch_v1.*_C		Addr_Arch_v1.*_I				
		support of cryptographically generated addresses	CGA				Self Test		Self Test				
SP500-267	6.7	<b>IP Security Requirements</b>											
		support of the IP security architecture	IPsecv3				IPsecv3_v1.*_C		IPsecv3_v1.*_I				
		support for automated key management	IKEv2				IKEv2_v1.*_C		IKEv2v1.0_I				
		support for encapsulating security payloads in IP	ESP				ESPv3_v1.*_C		ESP_v1.*_I				
SP500-267	6.11	<b>Application Requirements</b>											
		support of DNS client/resolver functions	DNS-Client				Self Test		Self Test				
		support of Socket application program interfaces	SOCK				Self Test		Self Test				
		support of IPv6 uniform resource identifiers	URI				Self Test		Self Test				
		support of a DNS server application	DNS-Server				Self Test		Self Test				
		support of a DHCP server application	DHCP-Server				Self Test		DHCP_Serv_v1.*_I				
SP500-267	6.2	<b>Routing Protocol Requirements</b>											
		support of the intra-domain (interior) routing	IGW				Self Test		OSPFv3_v1.*_I				
		support for inter-domain (exterior) routing	EGW				Self Test		BGP_v1.*_I				
SP500-267	6.4	<b>Transition Mechanism Requirements</b>											
		support of interoperation with IPv4-only systems	IPv4				Self Test		Self Test				
		support of tunneling IPv6 over IPv4 MPLS services	6PE				Self Test		Self Test				
SP500-267	6.8	<b>Network Management Requirements</b>											
		support of network management services	SNMP				Self Test		Self Test				
SP500-267	6.9	<b>Multicast Requirements</b>											
		support of basic multicast	Mcast				Self Test		Self Test				
		full support of multicast communications	SSM				Self Test		Self Test				
SP500-267	6.10	<b>Mobility Requirements</b>											
		support of mobile IP capability	MIP				Self Test		Self Test				
		support of mobile network capabilities	NEMO				Self Test		Self Test				
SP500-267	6.3	<b>Quality of Service Requirements</b>											
		support of Differentiated Services capabilities	DS				Self Test		Self Test				
		PHB Id					Self Test		Self Test				
SP500-267	6.12	<b>Network Protection Device Requirements</b>											
		support of common NPD reqts	NPD				N1 N2 N3 N4						
		support of basic firewall capabilities	FW				N1_FW						
		support of application firewall capabilities	APFW				N2_App_FW						
		support of intrusion detection capabilities	IDS				N3_IDS						
		support of intrusion protection capabilities	IPS				N4_IPS						
SP500-267	6.5	<b>Link Specific Technologies</b>											
		support of robust packet compression services	ROHC				Self Test		Self Test				
		support of link technology [O.1] Link=					Self Test		Self Test				
		(repeat as needed) support of link technology Link=											
12 < Check HERE if this stack's DOC includes additional information about tested capabilities and options on an attached page 3 of notes.													
Level	Level of support for USGv6-v1 Requirements for capability.					Color	Indication of USGv6-v1 Recommended Level of Support for device type / stack role.						
	Blank - SDOC makes no declaration for this capability.						Indicates capability that is recommended as mandatory (unconditional MUST) in the USGv6-v1 Profile.						
P	Passed required tests of USGv6-V1 requirements for these capabilities.						Indicates capability that is unusual for a given device type / stack role. Do not select without careful analysis.						
N	See notes page for details on the level of support of USGv6-v1 requirements for this capability.						Indicates capability that is left optional / conditional by the recommendations of the USGv6-v1 Profile.						
X	USGv6 capability not supported in product.												
<b>Test Suite</b> - Specific USGv6 Test suite used for test. See <a href="http://www.ntd.nist.gov/usg6/test-specifications.html">http://www.ntd.nist.gov/usg6/test-specifications.html</a>							<b>Note #</b> - reference to a detailed note about this capability or result on attached page						
<b>Test Lab / Result ID</b> - Abbreviation of accredited laboratory and its local identifier for this test result.							<b>Component Ref</b> - Supplier / Product / Stack ID of distinctly tested component that provides this capability.

## Instructions

Suppliers Declaration of Conformity for USGv6 Description and Instructions		Page 3	
<p><b>General:</b> This document describes network product from the identified supplier that claims support of USGv6 capabilities. General product and supplier identification is given on Page 1. Overall results of testing USGv6 capabilities for conformance, interoperability and network protection are given on Page 2. Detailed instructions for completing and interpreting each numbered field are given below. Note USGv6 Testing website at: <a href="http://www.antd.nist.gov/usgv6/testing.html">http://www.antd.nist.gov/usgv6/testing.html</a>. Contact: <a href="mailto:usgv6-project@antd.nist.gov">usgv6-project@antd.nist.gov</a>.</p>			
Field	Description and Instructions	Field	Description and Instructions
1	<b>The Document Requiring Conformity:</b> Identifies the profile version implemented. Not a user completeable field.		
2	<b>Product Identifier:</b> Supplier's concise name for the product declared.	11	<b>Summary of Results:</b> The format of this table mirrors the USGv6-v1.0 capabilities checklist (USGv6 Profile, Appendix A). The 12 categories of USGv6 capabilities are listed as subheadings, with subsidiary functions as line items. Configuration options related to conditional implementation of selected capabilities.
3	<b>Suppliers Name, Address and Contact Details:</b> Company name and point of contact for SDOC questions, street address, phone and email.		
4	<b>Product as Tested/Declared:</b> Product Identifier and detailed version information. If this SDOC reports original test results (page 2), include information about the specific product configuration(s) that was actually tested (e.g., hardware configuration, operating system, etc).		<b>Product Id/Stack Id:</b> The identification line of this page includes space for Product Id and Stack Id labels. Product Id is the same as given on Page 1. As there may be more than one unique IPv6 stack implemented in the product, the Stack Id field identifies the particular stack described. One Results Summary page per stack is required.
5	<b>Product Family:</b> A list of other products that use the same, unmodified IPv6 stacks such that their USGv6 capabilities are identical in form and function to the specific product configuration above. Test labs are only required to affirm the results for specific products tested. Test labs optionally may affirm recognized product families.		<b>Host, Router and Network Protection (NPD)</b> columns identify 'preferred' options: cells in green represent the NIST recommendations. Cells in grey denote atypical options, very unlikely to be implemented. The procuring Agency may additionally tailor these fields to indicate requirements for this acquisition.
6	<b>USGv6 Capability Summary:</b> The USGv6 stack implementation summary as identified by the '+' notation described in the USGv6 profile, Appendix A. For each IPv6 stack implementation in the product, a distinct Stack Id and reference to the attached Results Summary page (Page 2).		<b>Test Suite Conformance and Interoperability</b> columns identify capability sets for which a public test suite exists, and the versions applicable to USGv6-v1.0 test results. Major version v1 and all its minor versions are deemed acceptable. Over time, new versions will be added and older ones retired. There may be periods when more than one major version is acceptable concurrently.
7	<b>Self Contained or Composite SDOC:</b> If this SDOC relies on the test results of other distinct products, list the Supplier & Product ID/Stack IDs referenced and attach those original SDOCs to this one.		The supplier completes the adjacent <b>Test Lab and Result Id</b> column with the test lab acronym and unique result identifier (See Test Lab and Accreditor page on the Website). The buyer may opt to query results with the test laboratory using the specified Result Id(s). The supplier may opt to provide particular explanation of some results (partial results, additional options) in which case reference to note on an attached page 3. (e.g. "See Note# N"). See the USGv6 testing website to identify the test lab, and find contact details.
8	<b>Additional Declarations / Attachments:</b> List the supplier / product ID / Stack ID of any test results of composite components referenced by this SDOC.		Cells marked <b>Self Test</b> have no associated public test suite. If implemented by the supplier, the required adjacent annotation is "Self Declaration". Note that vendors declaring support for such a capability are declaring support for the associated specific requirements in the USGv6 Profile.
9	<b>Supplementary Attestations:</b> Suppliers disclosure of IPv6 only capabilities; multiple stacks present; product family applicabilities. These are not included to qualify or disqualify a product from purchase considerations, but to inform network administrators of potential configuration options relevant to USGv6 interoperability. Check all that apply.	12	<b>Additional Options Tested:</b> Vendor checks if it is desired to record tested options not part of the 'Musts' in the profile. Explanations on the page following the results summary.
10	<b>Signature Block:</b> Wet ink signature of the responsible product manager, dated. Printed name and position title on the line below.		<b>Headings and Special Notations:</b> as described. <b>Options for Test Lab and Result Id:</b> Currently 3 cases: (1) the test lab acronym and alphanumeric Id of the result set as assigned by the test laboratory; (2) 'Self declaration' denoting the supplier attests to adequate QA testing of the capability; (3) See attachment or note 'N', where the supplier explains variations in greater detail.
<p><b>Further Description:</b> <a href="http://www.antd.nist.gov/usgv6/testing.html">http://www.antd.nist.gov/usgv6/testing.html</a>, and NIST SP 500-267 USGv6 Testing Program Users Guide available at the website.</p>			

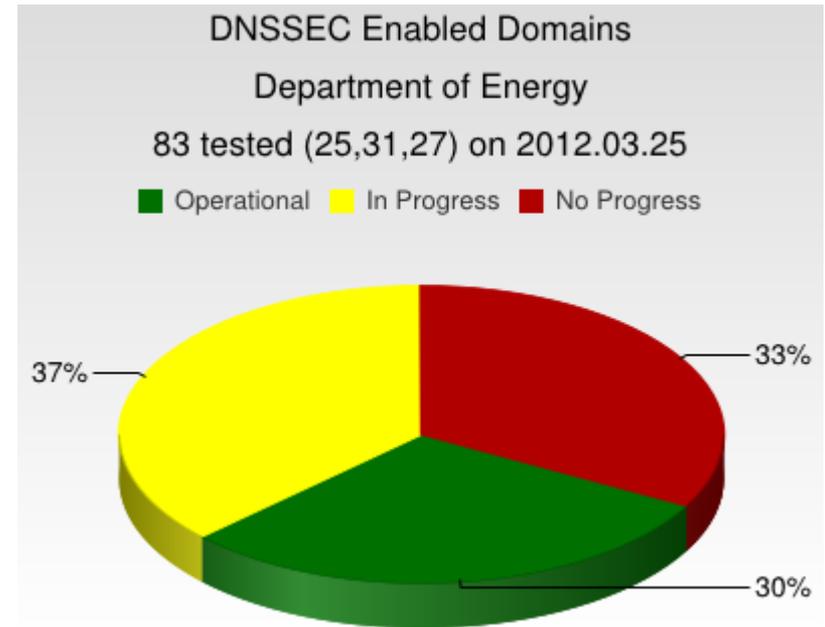

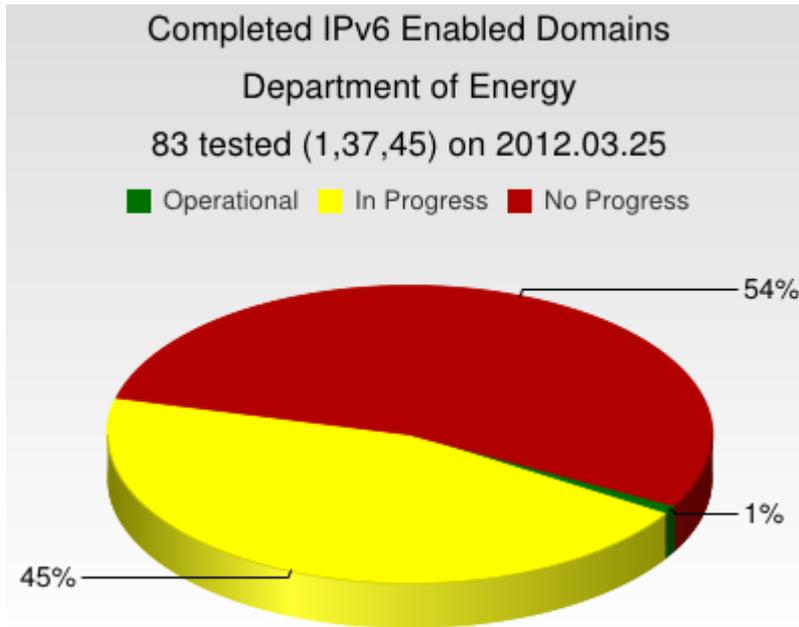

## Related Resources

### [USGv6-v1.0 Testing Website](#)

### Estimating IPv6 & DNSSEC External Service Deployment Status Department of Energy

<http://usgv6-deploymon.antd.nist.gov/cgi-bin/cfo?agency=energy>

**Estimating IPv6 & DNSSEC External Service Deployment Status Department of Energy**

Services went from 255 to 208; Mail and Web went from 85 to 47 and 85 to 75 respectively based on corrected baseline data

## “Where are we now?” and “are we making progress?”

- Tool examines IPv6 and IPv4 status of DNS, Mail and Web Services Weekly
- Tool is unrelated to the USGv6 profile and the USGv6 Testing Program
  - No assessment on compliance to USGv6 Profile
  - Services not monitored whether they are running over IPv6 stacks
- Monitored domain and service; report estimated number of IPv4 interfaces for that services/and number of interfaces that:
  - a) have an Ipv6 address configured,
  - b) Of those, the number of interfaces whose IPv6 addresses are reachable to our monitor,
  - c) the number of those interfaces actually running the service over Ipv6 (e.g. answering DS queries)
- Includes a heuristic indication of whether the service in question seems to be operating within the domain in question or if it’s provided elsewhere.
- Monitor relies on the DATA.gov list of agency domains [augmented].

## Addressing, Testing, and Applications

- ❖ **Check with your Web Developers to determine if:**
  - **Upgrades** are needed for *reachability and webcode*
    - Most of the work needed is on reachability only
  - **Webcode** update needed if
    - IPv4 addresses are hard coded in website, and/or
      - Address fields for IPv4, i.e. 32 bits wide
      - 127.0.0.1 loopback address
      - Data-structures and functions that are unusable in a dual-stack environment
    - IPv4 functions being used in scripts (PHP, CGI, Java, etc.)
- ❖ **Testing and certification guidelines** mentioned on [http://www.ipv6forum.org/ipv6\\_enabled](http://www.ipv6forum.org/ipv6_enabled)
- ❖ If listed on IPv6 Forum as an approved site
  - Place the IPv6 Forum WWW logo on your web site
  - IPv6 Forum *only needs reachability check before approval*
